

Reference plots/material

- Beamlne positions (g4bl)
 - ▷ AHSW (center) at $z = 0$ mm, (but) TargetCone at $z = 112.5$ mm

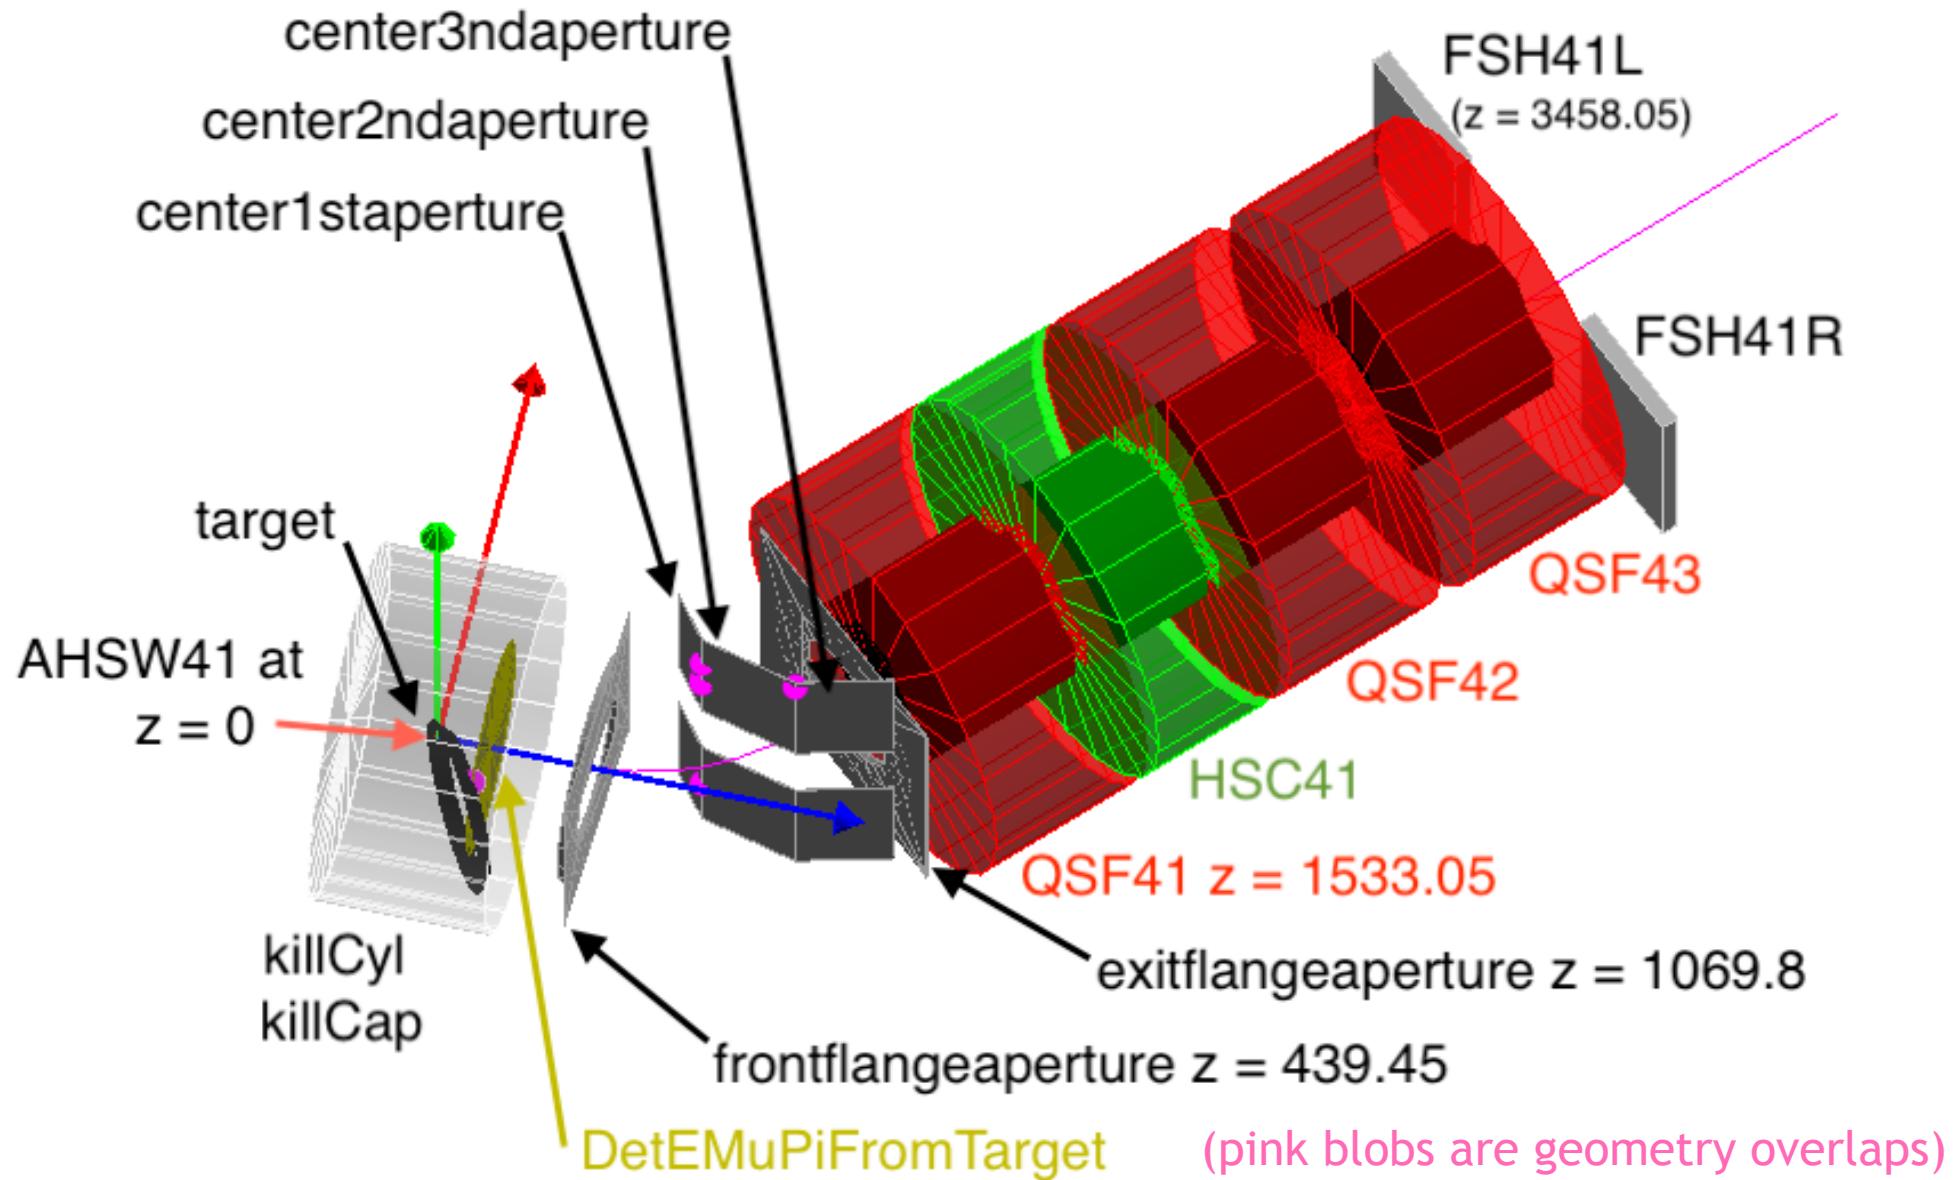

- Beamlne illustrations

github repository: github.com/ursl/pioneer-g4bl

Pion production g4bl setup

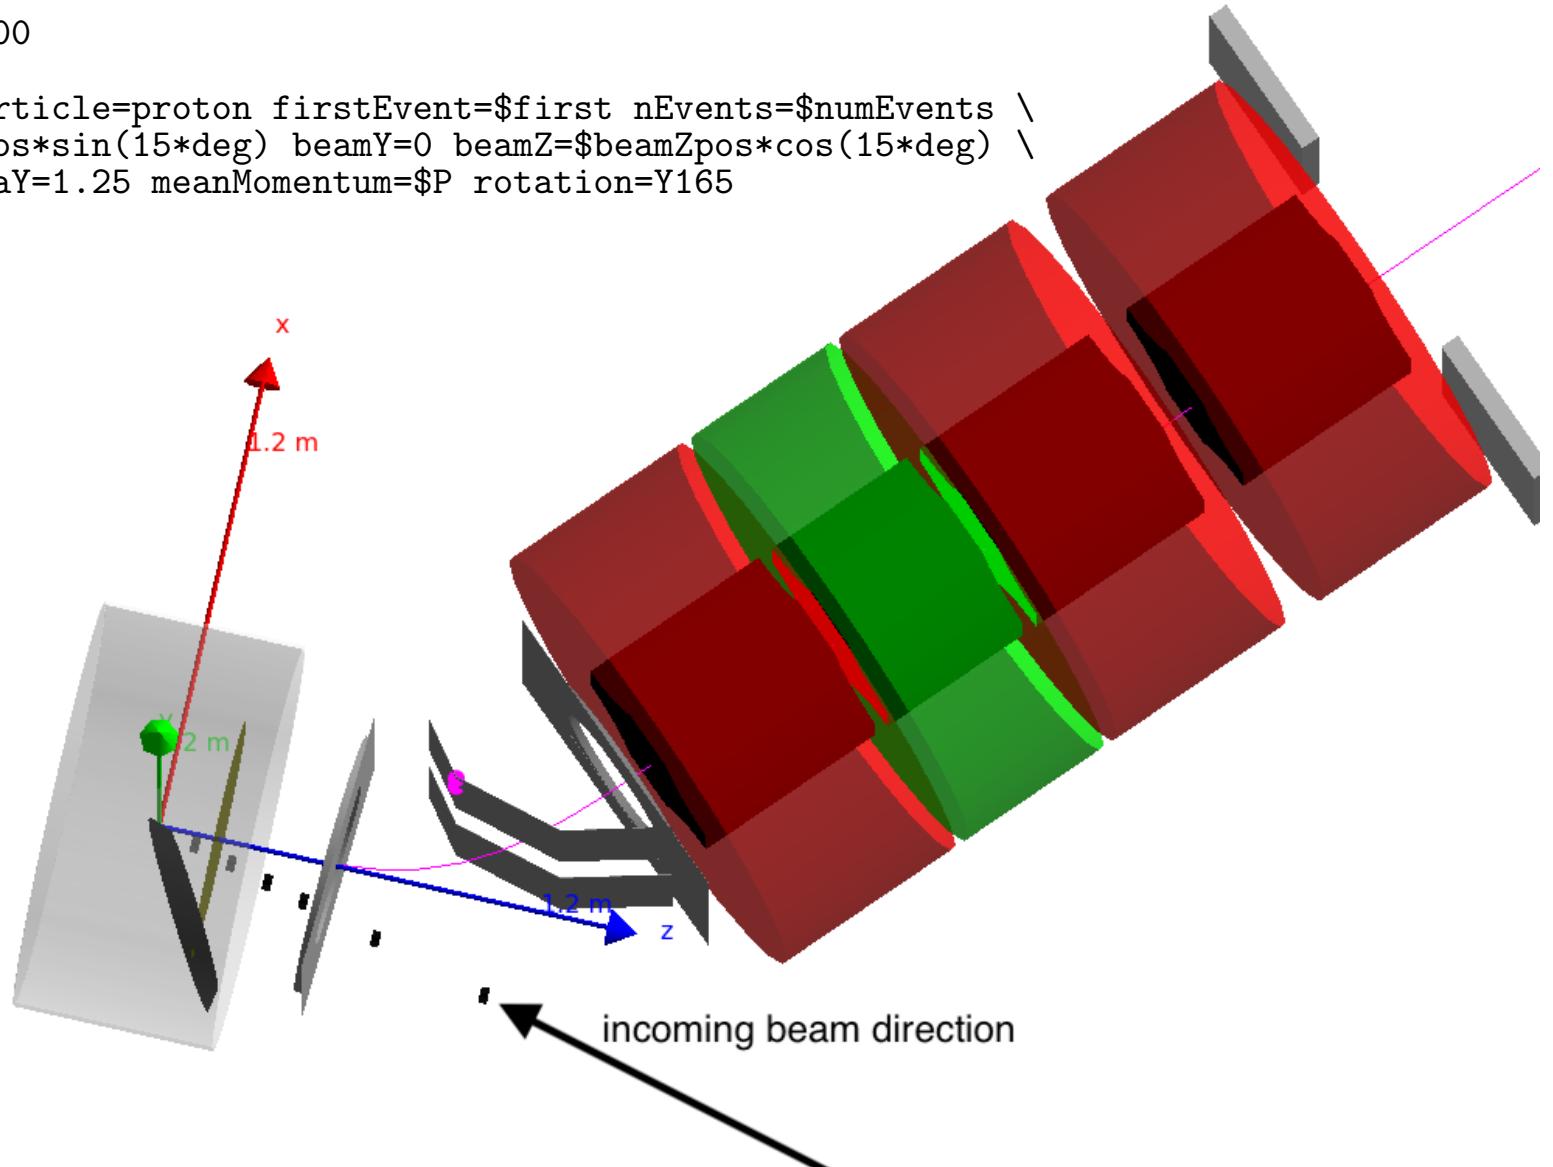

(overlap between Target and DetEMuPiFromTarget?)

Incoming beam

```
param beamZpos=100
```

```
beam gaussian particle=proton firstEvent=$first nEvents=$numEvents \
beamX=-1*$beamZpos*sin(15*deg) beamY=0 beamZ=$beamZpos*cos(15*deg) \
sigmaX=0.75 sigmaY=1.25 meanMomentum=$P rotation=Y165
```

AHSW41

- g4bl definitions

```
# -- Positions.txt
param -unset posAHSW41=0
param -unset posfrontarcAHSW41=440.01

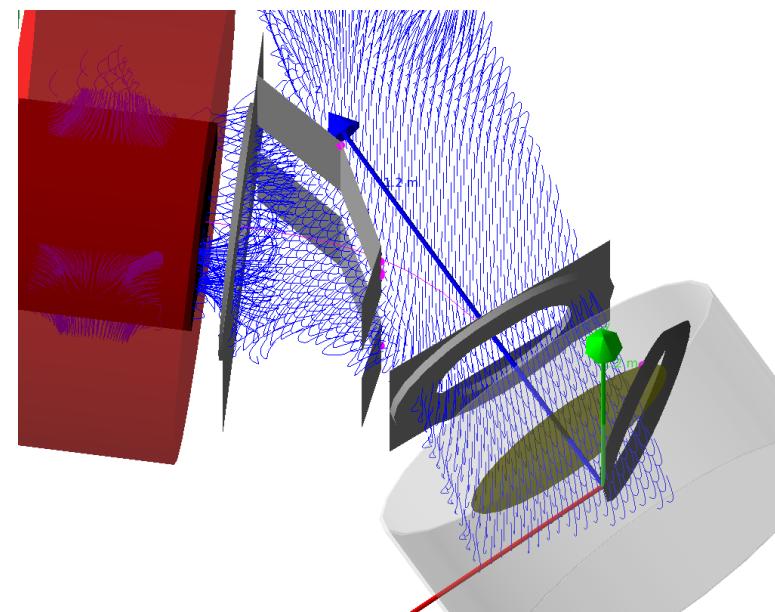

# -- g4bl card
fieldmap AHSW41 file="$G4BLPIioneer/pie5/feldahsw.dat"

# -- place flanges and other structures
# snip

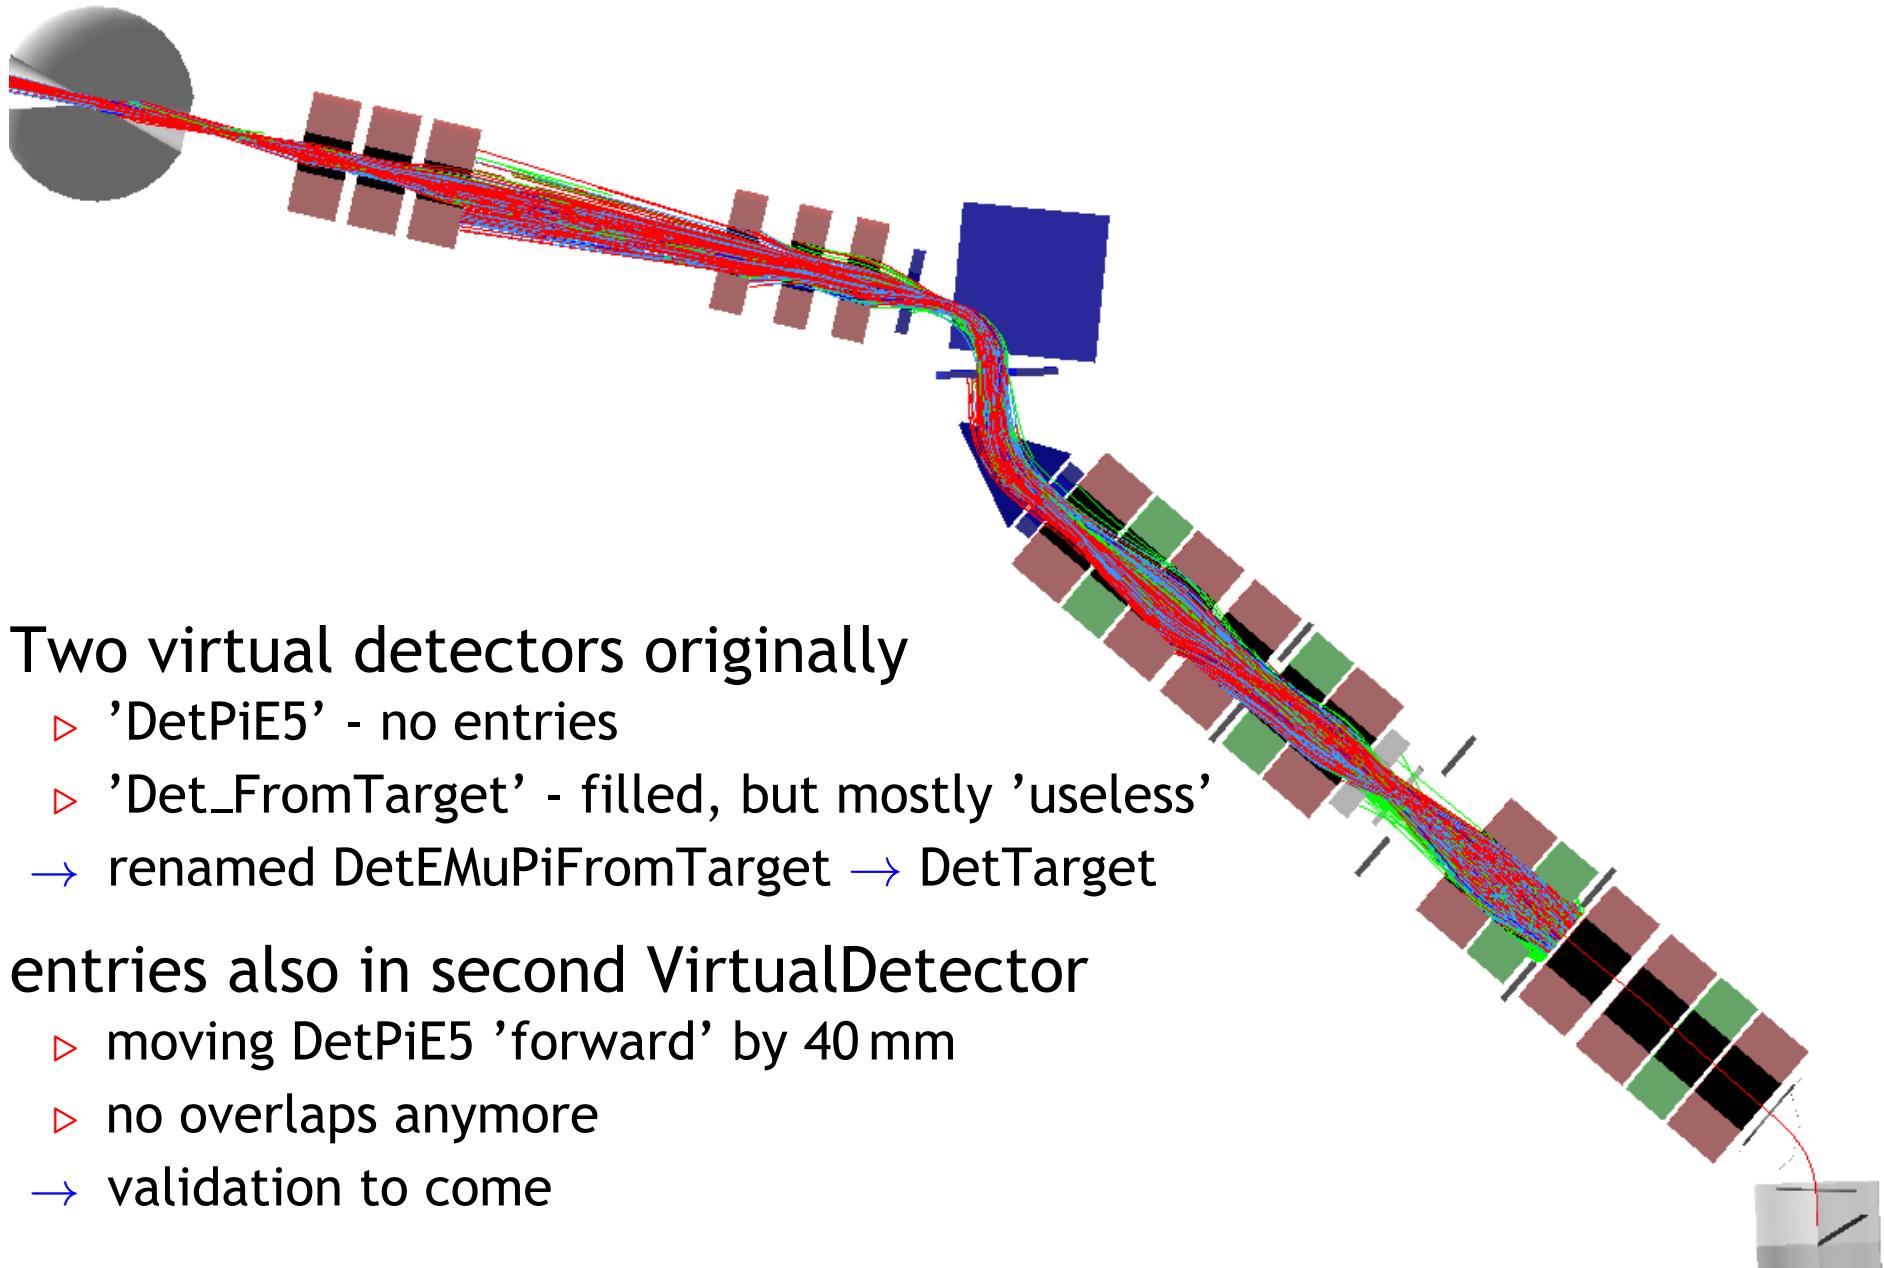

# -- place magnetic field
place AHSW41 z=$posAHSW41 x=0 rotation=Y165 current=$scaleMom*$AHSW41set
cornerarc CAHSW z=$posfrontarcAHSW41 angle=47.5 centerRadius=676.15 radiusCut=500
```

- fieldlines?

- ▷ no 'reasonable' display so far

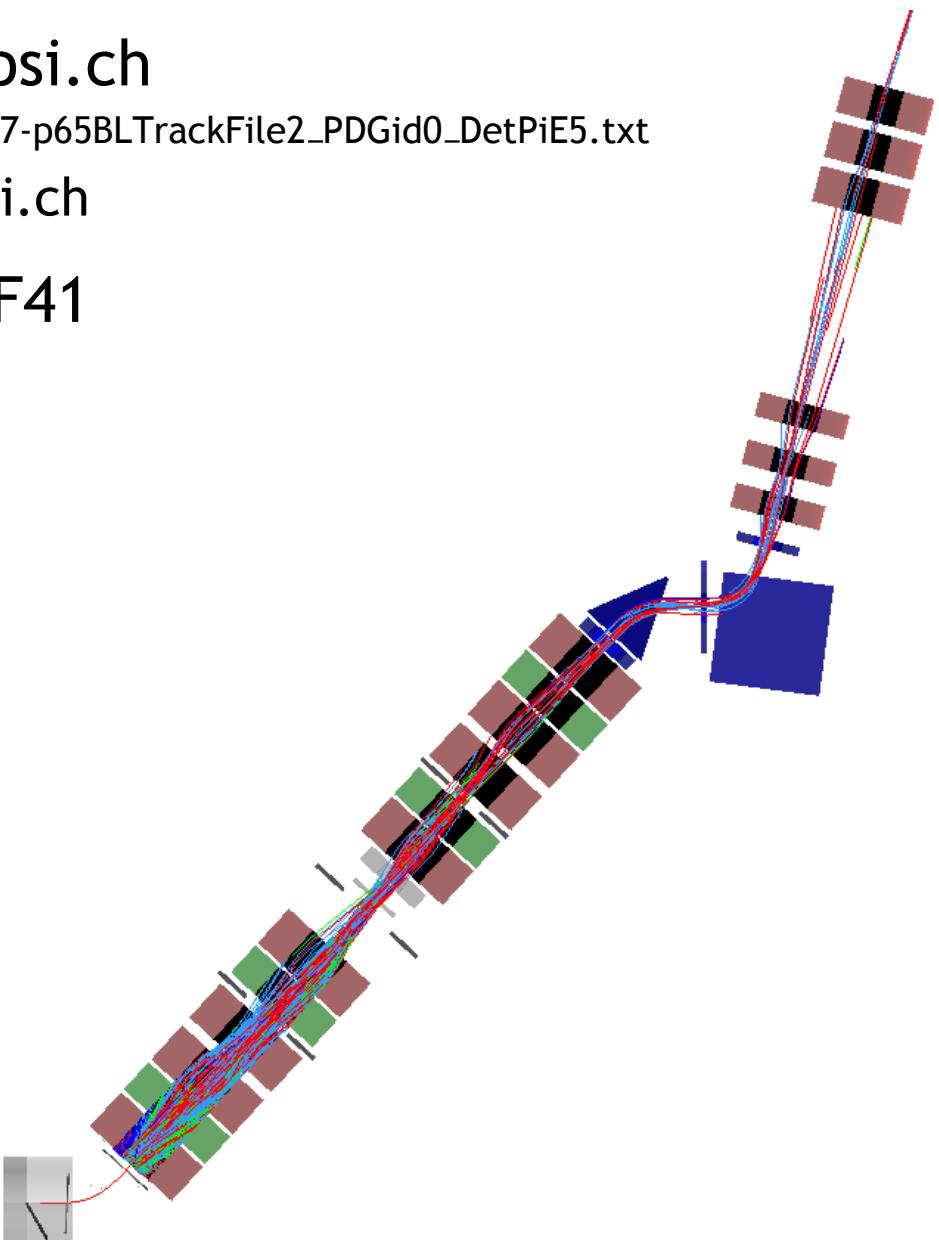

DetPiE5 VirtualDetector

- Two virtual detectors originally
 - ▷ 'DetPiE5' - no entries
 - ▷ 'Det_FromTarget' - filled, but mostly 'useless'
 - renamed DetEMuPiFromTarget → DetTarget
- entries also in second VirtualDetector
 - ▷ moving DetPiE5 'forward' by 40 mm
 - ▷ no overlaps anymore
 - validation to come

BL2 file production

- BL2 track file on merlin-l-002.psi.ch
 - ▷ /data/project/general/pioneer/g4bl/bl2/p0007-p65BLTrackFile2_PDGid0_DetPiE5.txt
 - ▷ reachable through VPN or hop.psi.ch
- VirtualDetector just before QSF41
 - ▷ so far 432254 tracks
 - ▷ production on-going

Magnet parameter definitions

- Current settings

```
place QSF rename=QSF41 z=$posQSF41 current=$scaleMom*$QSF41set
param -unset QSF41set=$corQSF41cur*$sign*$scaleQSF
param -unset scaleQSF=-1/100          # TOSCA calculation January 2018
param -unset corQSF41cur=$QSF41cur+$deltaQSF41cur
param -unset QSF41cur=-92.96
param -unset deltaQSF41cur=0
```

- ▷ input parameters distributed over a few files

- pie5/CurrentsCMBL2018.txt
- pie5/DeltaCurrents.txt
- pie5/ScaleFactors.txt

- Except that some parameters are 'fixed'

```
param AST41set=-0.38710867378611935
param ASC41set=-1.1354996108759758
param QSB41set=-6.822881
param QSB42set=11.210779
param QSB43set=-4.73587
param QSK41set=0.598725
param QSK42set=-0.931514
param QSK43set=0.613911
```

cf. [PionTransport/G4V7M_piE5_pions.i](#) (also in the original gitlab file)

Parameter evolution

- 'Fixed' parameters
 - ▷ changes up to 50% between Zach's and Giovanni's setup

"Zach"	"Giovanni"
param AST41set=-0.38710867378611935	AST41set=-0.3896
param ASC41set=-1.1354996108759758	ASC41set=-1.19
param QSB41set=-6.822881	QSB41set=-8.3444275

QSK41 scan

- Run 113 is a QSK41 scan ("QSK triplet scan 5x5")
 - ▷ AHSW epics current same as for run 100 ("65MeV/c tune")
 - ▷ json current: 34.2, . . . , 41.8
 - ▷ CurrentsCMBL (for 28 MeV): param -unset QSK41cur=24.07
 - ▷ for 65 MeV: param -unset QSK41cur=55.88
- ⇒ That's what I am doing next
